

NOSEC JSky

Web Application Security Vulnerability Scanner

 White Paper

NOSEC JSky

Web Application Security Vulnerability Scanner

2/3 web sites are easily compromised?

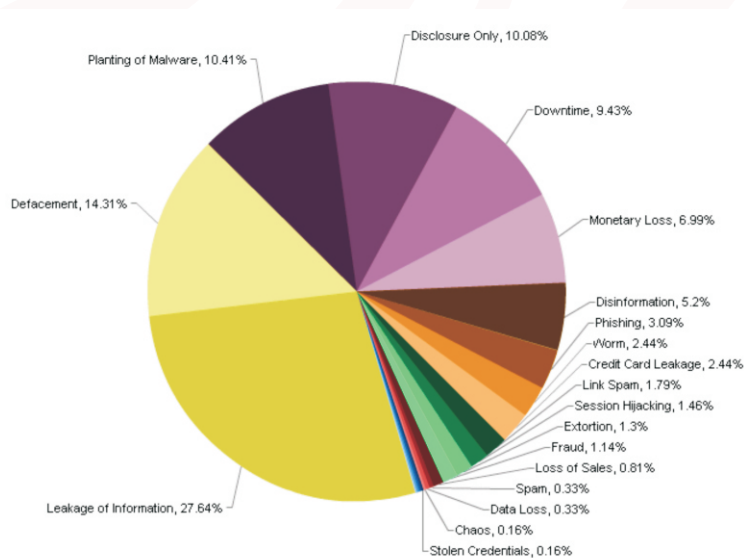

Accounting to Gartner, 2/3 of websites have security problems. How to accurately assess Web applications for security vulnerabilities?

The value of the corporate assets that are accessible through Web applications is growing every day. Unfortunately, so is the threat of damage and loss due to hacking.

Hackers have

- Plant malware on website homepage,
- Compromised valuable corporate brands,
- Gained access to mission critical and highly sensitive information thought to be far out of reach of the application user,
- Stolen goods from ecommerce companies.

These are just a sample of the kinds of threats businesses face every day they are open for business online. A more realistic view:

Web Application Security Vulnerability Scanner

NOSEC JSky is another product produced by NOSEC who build NOSEC Pangolin. It helps you test for the latest vulnerabilities in current Web technologies so that you can find security problems in your applications before the hackers do.

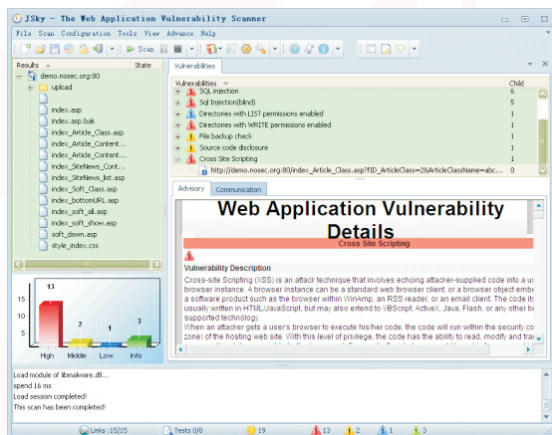

NOSEC JSky is a website security testing tool that automates vulnerability assessments. Support all Web application technologies – including ASP, ASP, NET, Java, PHP, JavaScript, Flash, Ajax. Jsky is a fast scanner which covers all Web application vulnerabilities including SQL-Injection and Cross-Site Scripting, WASC TC 2, OWASP TOP 10 compliance. JSky lack the intelligence required to scan the complexities of today's interactive Web 2.0 applications.

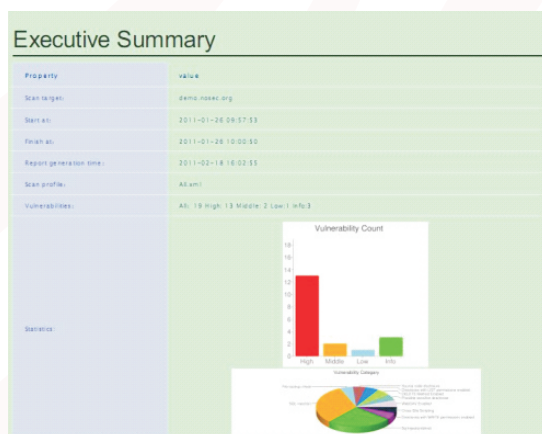

NOSEC JSky

Web Application Security Vulnerability Scanner

NOSEC JSky is specifically designed to assess potential security flaws and to provide all the information you need to fix them. JSky delivers the latest evolution in assessment technology, a Web application security product that adapts to any enterprise environment.

↑ JSky can help users quickly identify, understand and fix critical web vulnerabilities.

↑ Executive report summary

Benefits:

- With NOSEC JSky, you can identify vulnerabilities in your Web site before the hackers do. Using NOSEC JSky throughout the application life cycle standardizes security auditing tests and schedules. It also lowers the total cost-of-ownership, as NOSEC JSky notifies you of possible vulnerabilities before they become actual security risks. Early detection and resolution of Web application vulnerabilities decreases the risk of attack and saves valuable time and resources.

Features:

- Support all Web application technologies – including ASP, ASP.NET, Java, PHP, JavaScript, Flash and Ajax.
- Fast web application vulnerability test save you lots of time.
- Penetration testing module inside to show you what may happens if hackers exploit the vulnerability.
- Discover malware and undesirable links embedded in web sites with fully integrated malware testing
- Assess multiple website simultaneously.
- Most advanced testing to avoid SQL injection and Cross site scripting attack.
